A GLOBAL CO₂ EMISSIONS ANALYSIS

1. INTRODUCTION

1.1 Overview

CO₂ emission refer to the release of CO₂ gas in the atmosphere. The majority of CO₂ emission are a result of human activities such as burning fossil fuels and emission of gases from various company activities. The increasing of CO₂ in the atmosphere has caused the earth's temperature to raise, sea-level rise and extreme weather events and this pose huge health threat in living organisms.

1.2 Purpose

The purpose of CO₂ emissions analysis is to assess the amount of carbon dioxide and other greenhouse gases being released into the atmosphere as a result of human activities. This analysis is critical to understanding the extent of human impact on the environment and climate.

Global CO2 emissions

2.2 Ideation and Brainstorming Map

1

Define your problem statement

PROBLEM

CO2 emissions from natural sources such as fossil fuel burning and forest fires are believed to have a significant impact on climate change and global warming .

Brainstorm

Vignesh P

Industrial chemical use is a major contributor to CO2 pollution.

Increase solar and wind capacity 3.5 times to 500 gigawatts.

Increase zero emission vehicle sales share to 50 %.

Eliminate electricity generation from coal.

CO2 level increase ... Reducing of forest area.

Hari Vignesh P

One of the most effective ways to prevent CO2 emissions is to use renewable energy sources like wind, solar, and hydropower instead of fossil fuels.

Trees absorb CO2 from the atmosphere during photosynthesis, so planting trees and preserving forests can help prevent CO2 emissions.

Improving energy efficiency in buildings, transportation, and industry is another critical strategy for preventing CO2 emissions.

Carbon capture and storage (CCS) technology captures CO2 emissions from power plants and other industrial processes and stores them underground.

Naveen Kumar R

CO2 Emission stemming from the burning of fossil fuels and manufactured cement.

Use biomass as fuel.

Shift from coal to natural gas.

R&D for carbon capture, sequestration and carbon-neutral fuels.

Where the population is high, carbon-dioxide is high.

Saravanan C

CO2 Emission stemming from the burning fossil fuels.

CO2 is 53% more dense than dry air

Maintain current natural gas generating capacity for reliability.

CO2 level increase ... lack of tree plantation awareness

Vadivel G

Decomposition of lime stone in cement factories.

CO2 in the atmosphere causes global warming.

CO2 can reduce by photosynthesis.

Maintain current natural gas generating capacity for reliability.

CO2 level increase ... urbanization.

Group ideas

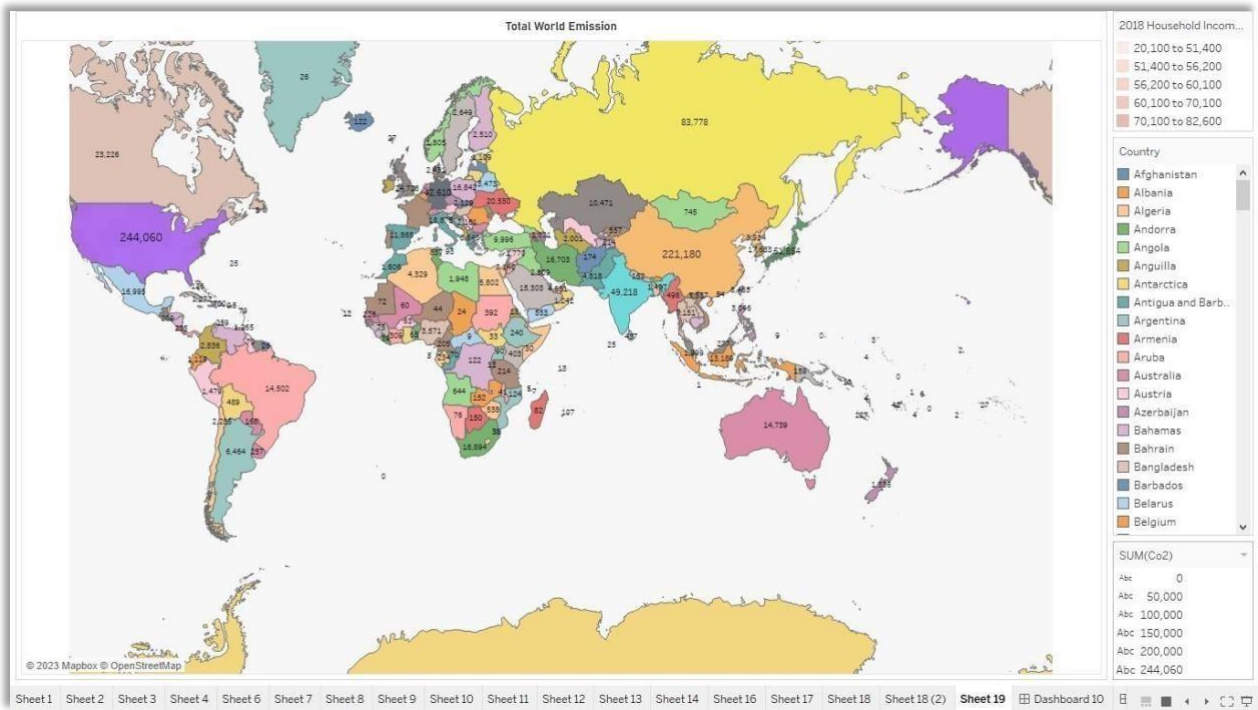

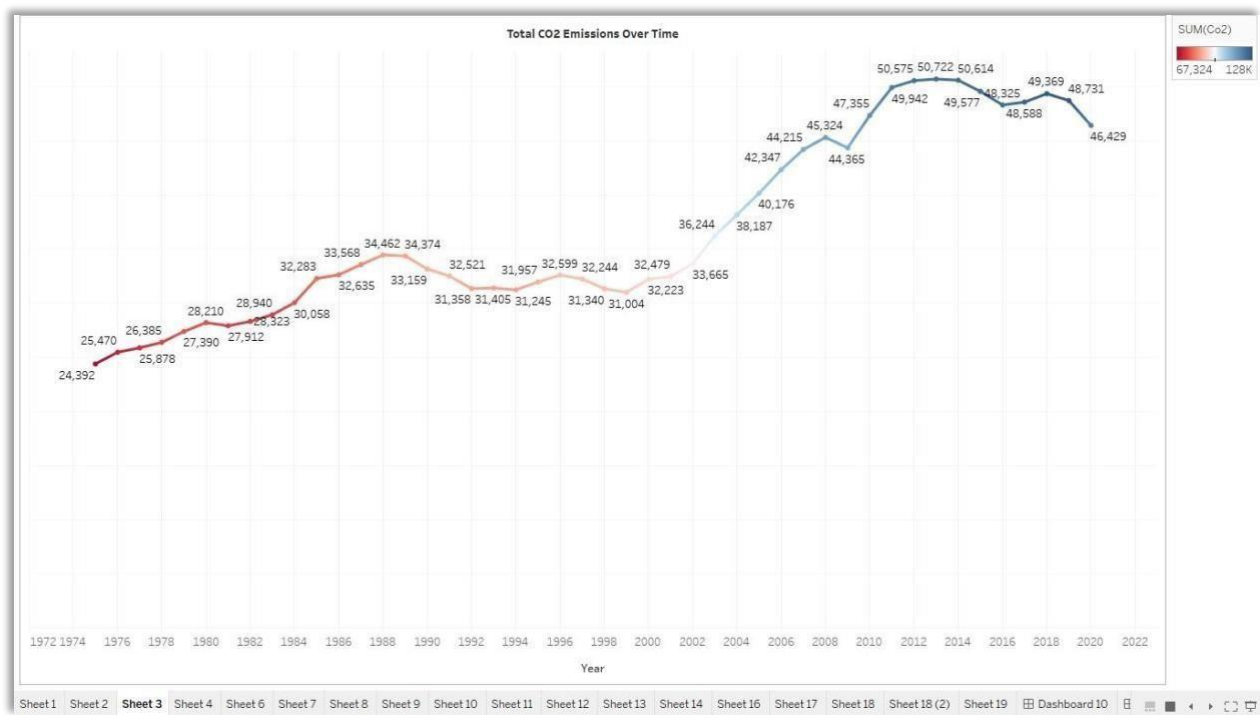

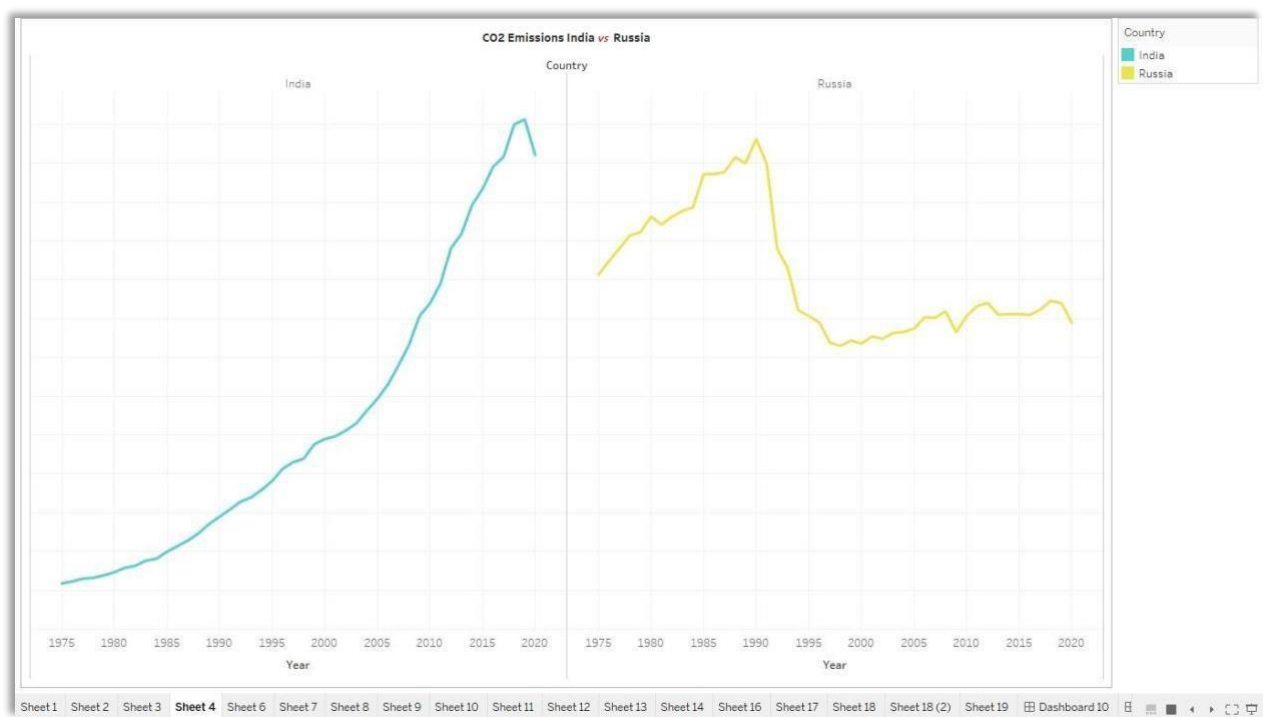

CO2 is 53% more dense than dry air

Prioritize

A Global Co2 Emission Analysis

Carbon dioxide emissions are the primary driver of global climate change. It's widely recognised that to avoid the worst impacts of climate change, the world needs to urgently reduce emissions.

Home

ADVANTAGES & DISADVANTAGES

Advantages

- ✓ Identification of major sources of emissions
- ✓ Monitoring of progress in reducing emissions
- ✓ Benchmarking of emissions performance across sectors, companies, and countries
- ✓ Incentivization of emissions reduction efforts

Disadvantages

- ✓ Limited Data
- ✓ Difficulty in Measuring Emissions

APPLICATION

CO₂ emission analysis projects can help with policy decisions, identifying high-emitting industries, tracking progress towards emissions reduction, facilitating carbon trading, supporting sustainable business practices, and promoting investment in renewable energy and clean technology.

CONCLUSION

Important for justifying climate change by providing information to policy decisions and promote sustainable practices. Nonetheless, efforts to develop and improve CO₂ emissions analysis projects are crucial for addressing climate change. This analysis using Tableau software provides immediate insight of CO₂ emissions in the single dashboard. This analysis also alerts the human society to take necessary action to reduce CO₂ emission to Secure from Global warming.

FUTURE SCOPE

- ✓ Much information have to make available
- ✓ Which type of company emits much CO₂
- ✓ Analysis of Key Data Metrics
- ✓ Promote renewable energy
- ✓ Implement carbon pricing mechanisms
- ✓ Promote alternative transportation

Thank You
